EXPERIMENT - 5

Building Reports, Dashboards and Custom Pages (UI Builder) for the Application

Insurance Claim Request & Processing Management

Application Name	Insurance Claim Request & Processing Management
Form Name	Claim_Request_Form
Experiment Focus	Three reports and Claims_Dashboard
Student Name	HARIHARAN N
Student Register No.	241401024
Experiment	5
Platform	Zoho Creator
Course	Low-Code Application Development using Zoho Creator

Lab Record
Reports and a custom page provide operational views of insurance claims, including totals, amounts, category and status breakdowns, recent submissions and the processing queue.

Department of Computer Science and Business Systems

Rajalakshmi Engineering College

1. Objective

To transform claim records into useful reports and a dynamic dashboard in Zoho Creator, and verify the displayed figures against the underlying records.

2. Problem Statement

Claims staff need to identify open requests, prioritize higher-value claims and monitor workloads without reviewing every form individually. Management also needs a consistent overview of amounts, claim categories and progress.

3. Scope and Components

Component	Purpose / configuration
Claim_Request_Report	All accessible claim records; reference, claimant, policy, category, amount, date, status, officer and approval amount.
Pending_Claims_Report	Processing queue: Claim_Status is neither Approved nor Rejected.
High_Value_Claims_Report	Claim_Amount_Requested > 50000.
Claims_Dashboard	Welcome panel plus HTML/Deluge snippet: five KPI cards, two bar summaries, recent five records and oldest ten open claims.

4. UI Design

The dashboard uses a heading panel, white KPI cards, blue status bars, green category bars and compact tables. Report links provide navigation to all claims, the processing queue and high-value claims. Figures are calculated from records when the page opens.

5. Report Criteria and Dashboard Logic

Metric / section	Calculation	Final value
Total claims	Count all records	11
Requires processing	Status != Approved AND != Rejected	8
Approved claims	Status == Approved	3
Requested / INR	Sum Claim_Amount_Requested	1,410,450
Approved amount / INR	Sum Approval_Amount for Approved	100,000
High-value report	Requested amount > 50,000	4 records
Recent claims	Added_Time descending; first 5	References 11, 10, 9, 8, 7
Processing table	Open claims; oldest first; limit 10	8 records

6. Status and Type Reconciliation

Status	Count	Claim type	Count
Submitted	5	Motor Insurance	4
Under Review	3	Health Insurance	1
Assigned	0	Life Insurance	1
Investigation	0	Property Insurance	1
Approved	3	Travel Insurance	1
Rejected	0	Other	3

Both distributions sum to 11. A pre-existing Approved record has no approval amount; it contributes to the count but zero to the approval sum.

7. Procedure

1. Open the source form and configure Claim_Request_Report with useful business columns.

2. Create the pending and high-value reports using the documented criteria.

3. Open Claims_Dashboard in Page Builder and retain the welcome panel.

4. Add the HTML/Deluge snippet to calculate count and sum metrics, type/status bars and bounded record lists.

5. Link dashboard navigation to the three reports.

6. Verify all-report count, filtered counts and amounts using the live records; test access under the staff role.

8. Deluge Aggregate Excerpt

```
<%{
 totalClaims = Claim_Request_Form[ID != 0].count();
 pendingClaims = Claim_Request_Form[Claim_Status != "Approved" && Claim_Status !=
    "Rejected"].count();
 approvedClaims = Claim_Request_Form[Claim_Status == "Approved"].count();
 requestedTotal = ifnull(Claim_Request_Form[ID != 0].sum(Claim_Amount_Requested),0);
 approvedTotal = ifnull(Claim_Request_Form[Claim_Status == "Approved"].sum(Approval_Amount),0);
 statusList = {"Submitted","Under Review","Assigned","Investigation","Approved","Rejected"};
 typeList = {"Motor Insurance","Health Insurance","Life Insurance","Property Insurance","Travel
    Insurance","Other"};
%>
<style>
```

The rendered bars and tables are custom HTML driven by Deluge. They are not separate native chart-report components. The source snippet uses a zero-total guard before calculating percentage widths.

9. Testing and Observations

The final all-claims, pending and high-value reports showed 11, 8 and 4 records respectively. Changing demo claim #10 from Submitted to Under Review changed its status grouping without changing the pending total. Caleb could access all three reports and the dashboard as Claims Officer.

10. Implementation Evidence - UI Builder

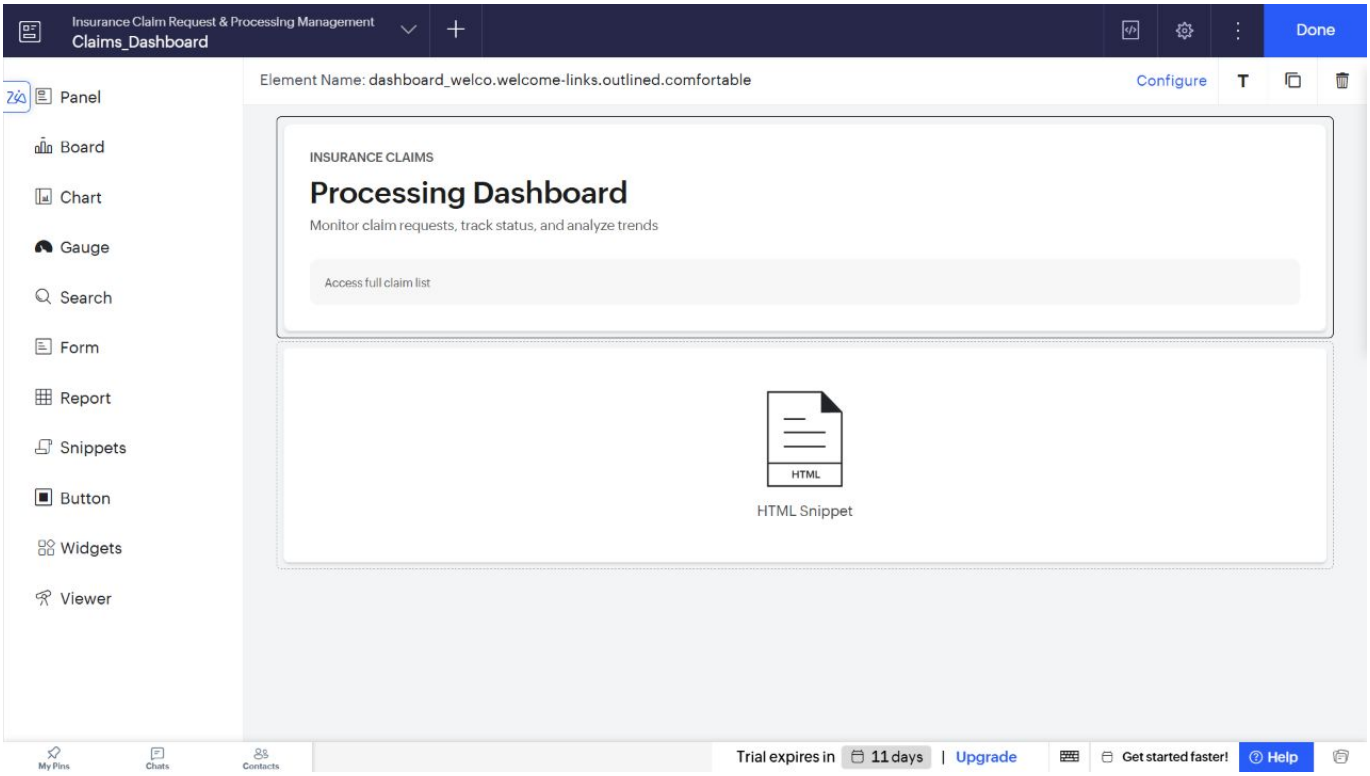

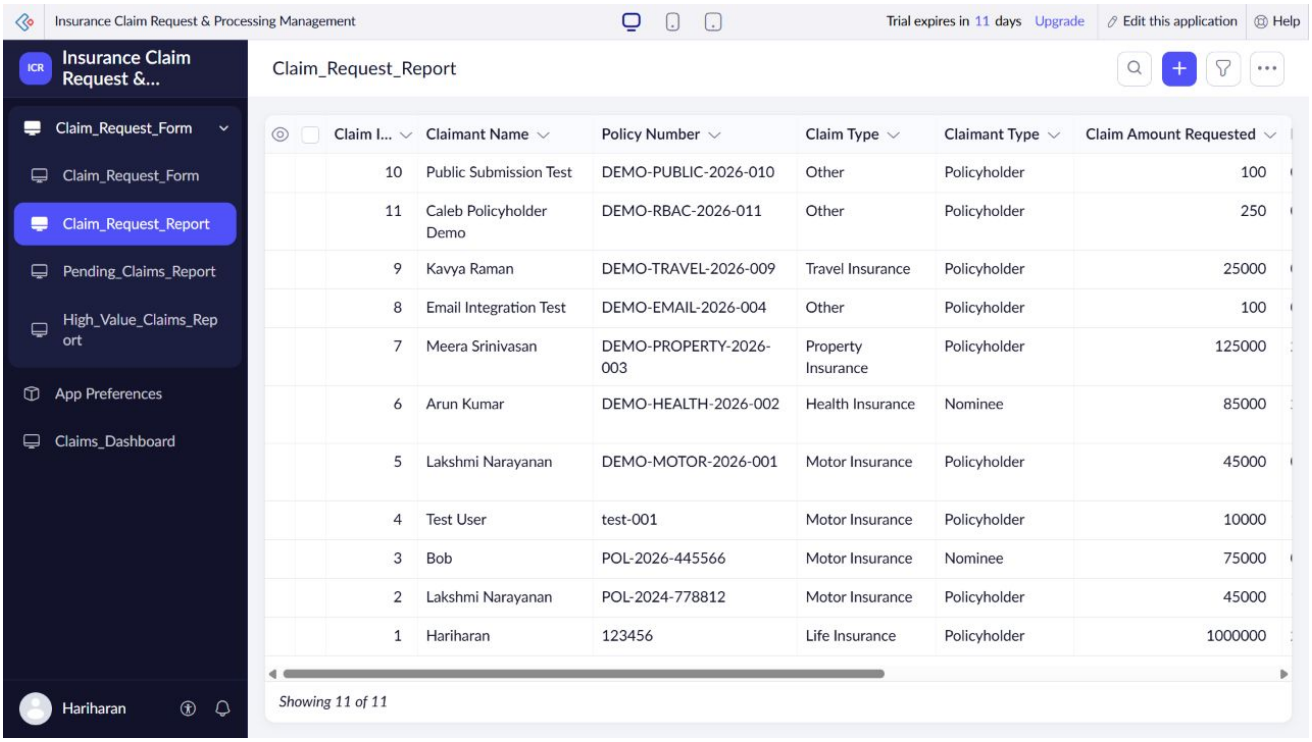

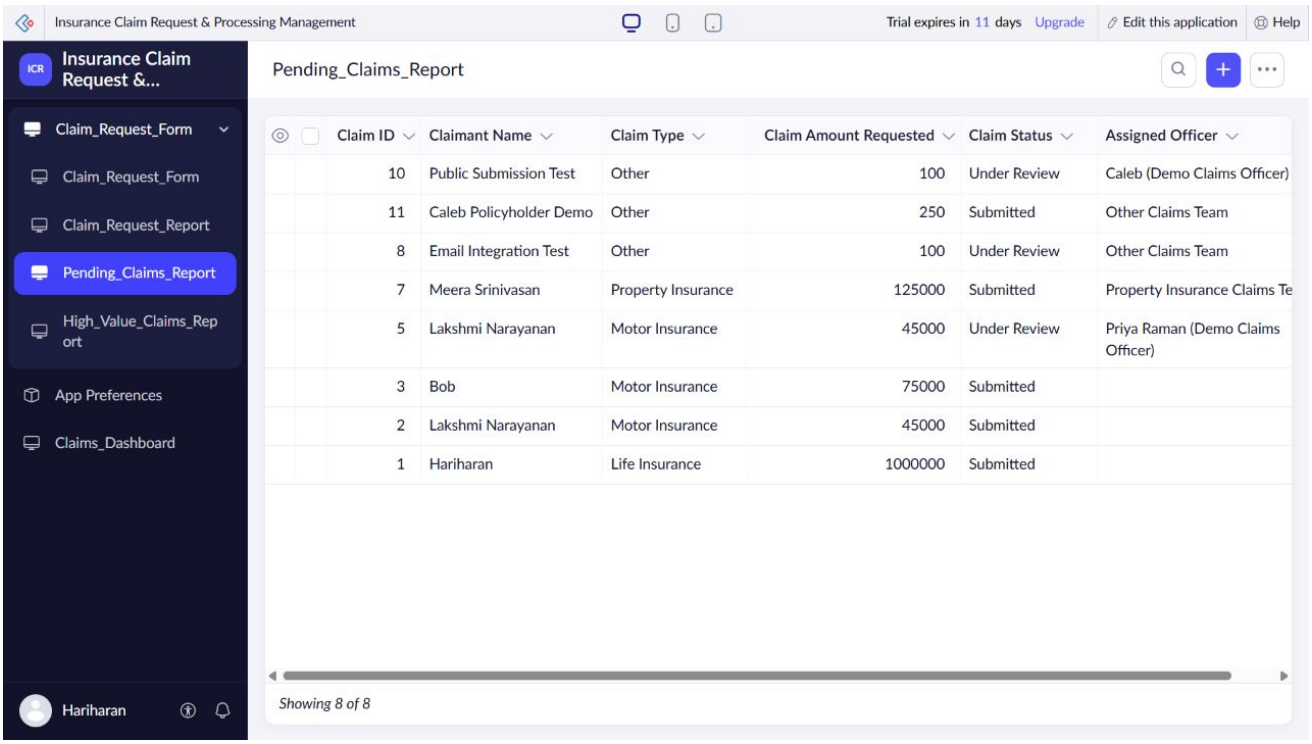

Figure 1. Actual Page Builder showing the dashboard welcome panel and HTML Snippet component.

10. Implementation Evidence - Reports

Claim I...	Claimant Name	Policy Number	Claim Type	Claimant Type	Claim Amount Requested
10	Public Submission Test	DEMO-PUBLIC-2026-010	Other	Policyholder	100
11	Caleb Policyholder Demo	DEMO-RBAC-2026-011	Other	Policyholder	250
9	Kavya Raman	DEMO-TRAVEL-2026-009	Travel Insurance	Policyholder	25000
8	Email Integration Test	DEMO-EMAIL-2026-004	Other	Policyholder	100
7	Meera Srinivasan	DEMO-PROPERTY-2026-003	Property Insurance	Policyholder	125000
6	Arun Kumar	DEMO-HEALTH-2026-002	Health Insurance	Nominee	85000
5	Lakshmi Narayanan	DEMO-MOTOR-2026-001	Motor Insurance	Policyholder	45000
4	Test User	test-001	Motor Insurance	Policyholder	10000
3	Bob	POL-2026-445566	Motor Insurance	Nominee	75000
2	Lakshmi Narayanan	POL-2024-778812	Motor Insurance	Policyholder	45000
1	Hariharan	123456	Life Insurance	Policyholder	1000000

Figure 2. All-claims report: 11 records.

Claim ID	Claimant Name	Claim Type	Claim Amount Requested	Claim Status	Assigned Officer
10	Public Submission Test	Other	100	Under Review	Caleb (Demo Claims Officer)
11	Caleb Policyholder Demo	Other	250	Submitted	Other Claims Team
8	Email Integration Test	Other	100	Under Review	Other Claims Team
7	Meera Srinivasan	Property Insurance	125000	Submitted	Property Insurance Claims Te
5	Lakshmi Narayanan	Motor Insurance	45000	Under Review	Priya Raman (Demo Claims Officer)
3	Bob	Motor Insurance	75000	Submitted	
2	Lakshmi Narayanan	Motor Insurance	45000	Submitted	
1	Hariharan	Life Insurance	1000000	Submitted	

Figure 3. Pending report: 8 open claims; Approved and Rejected excluded.

10. Implementation Evidence - High Value

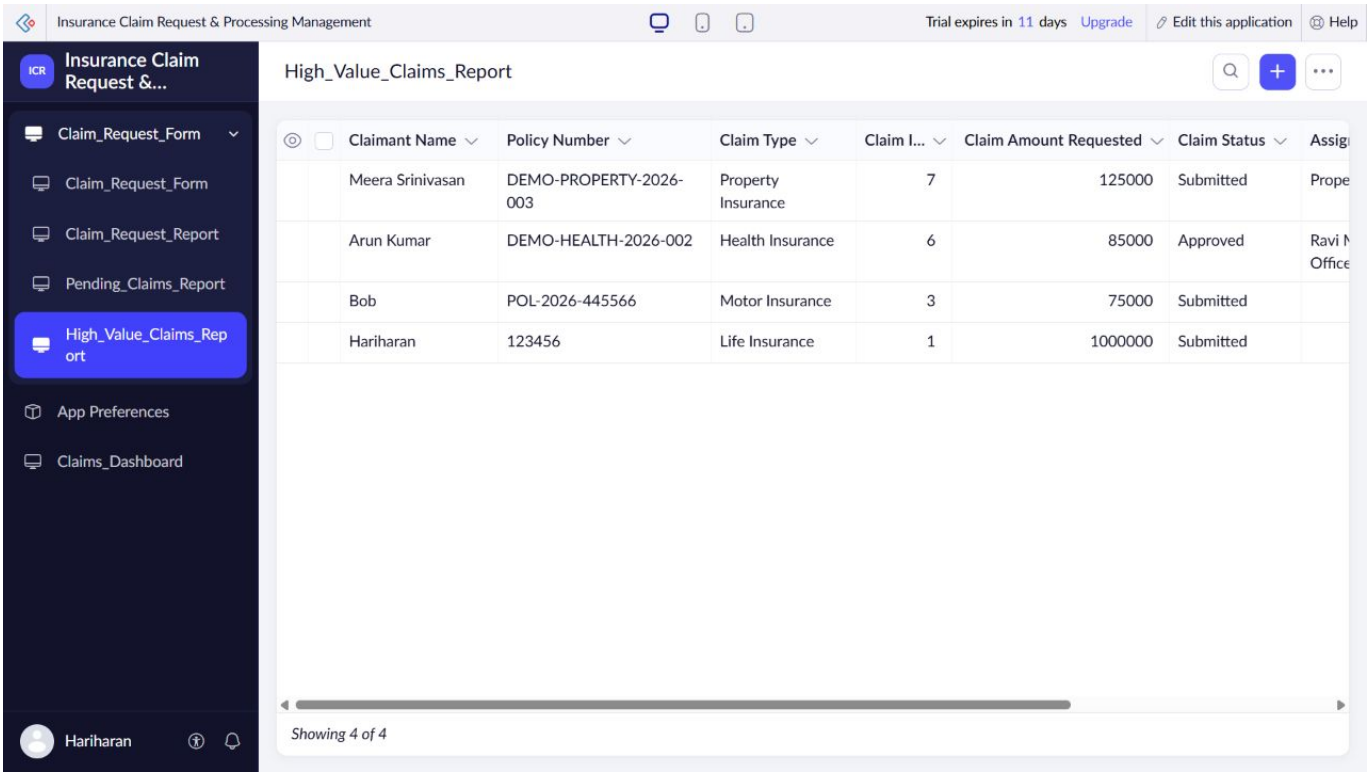

Figure 4. High-value report: 4 records above INR 50,000.

10. Implementation Evidence - Dashboard

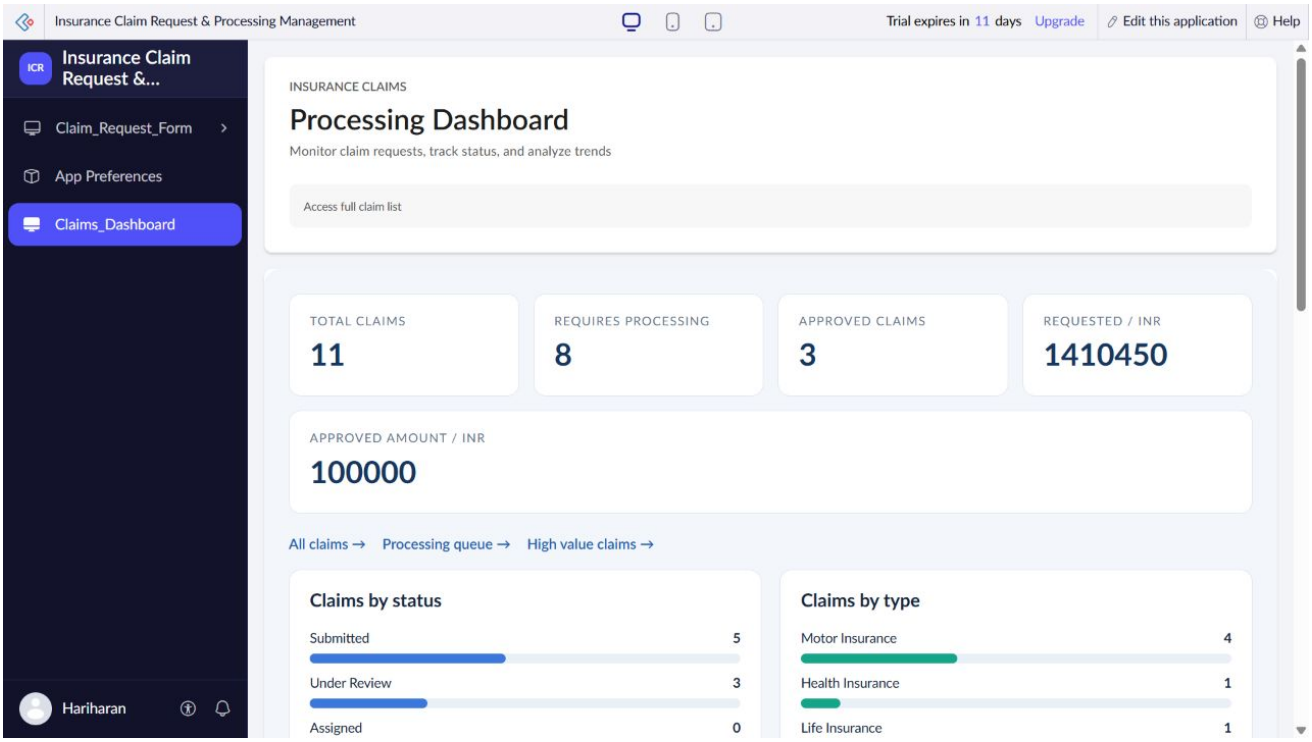

Figure 5. Dashboard heading and KPI cards reflecting the final records.

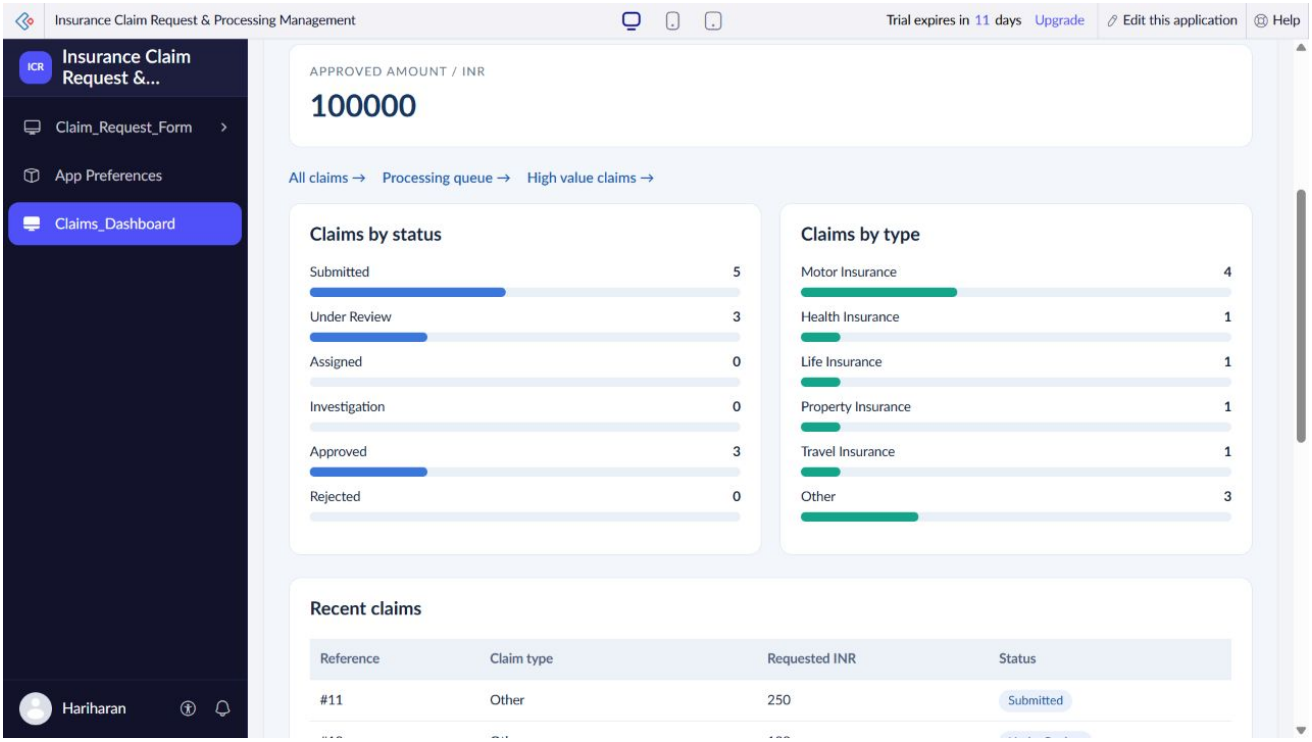

Figure 6. Live status/type analysis and recent-claim information.

10. Implementation Evidence - Processing Queue

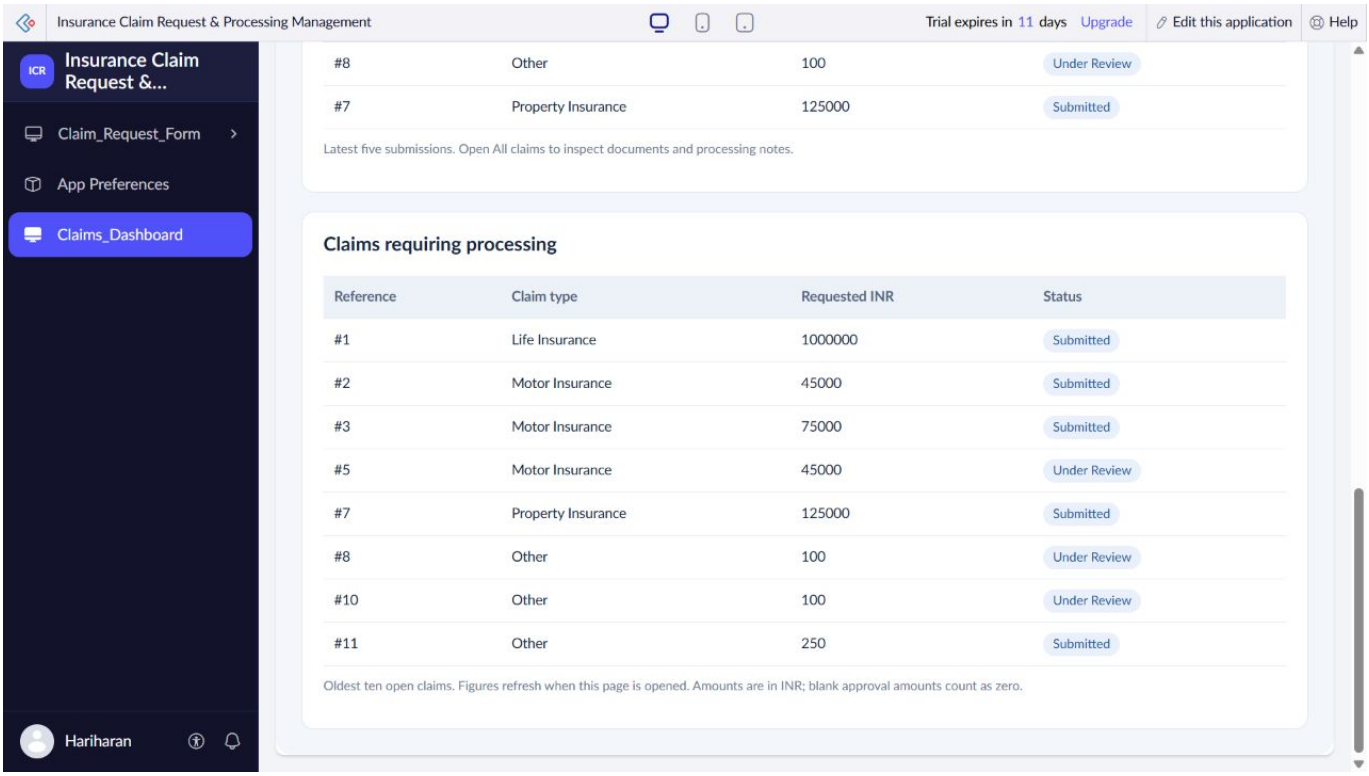

Figure 7. Recent submissions and oldest open claims in the dashboard tables.

11. Expected Learning Outcomes

1. Create purpose-specific reports using business criteria.

2. Build a custom page with calculated metrics and visual summaries.

3. Reconcile dashboard aggregates with source records.

4. Connect reporting navigation to operational workflows.

12. Result

Three reports and Claims_Dashboard were implemented and verified against the final 11-record dataset. The dynamic page correctly showed 8 open claims, 3 approved claims and the requested/approved totals.

Conclusion

The reporting interface supports both summary monitoring and detailed claims processing from a single application.

Observed scope: Counts in historical workflow screenshots reflect their capture time. The final values in this report are the reconciled 11-record snapshot.
