# EXPERIMENT 11

## Deploying a Zoho Creator application from development to production environment.

| Student details | Project details |
|---|---|
| HARIHARAN N Register No. 241401024 | Insurance Claim Request & Processing Management |
| Department: CSBS | Platform: Zoho Creator (India region) |
| Institution: Rajalakshmi Engineering College | Evidence / verification date: 19 October 2026 |

## Aim

To publish a tested insurance application update through Stage to Production and verify version history, application availability and separation of environment data.

## Execution status

COMPLETED: version 1.1 published from Development to Stage and then Production on 19 October 2026. The live dashboard smoke test passed.

## Application context

The project records insurance requests, validates submitted details, assigns claims for processing and presents claim status and amount summaries. Existing forms, reports, Deluge workflows and permission profiles provide the base for this experiment.

Screenshots in this report are actual captures from the project account. Explanations, tables and code listings are documentation, not simulated platform screenshots.

## Release procedure and change control

**1.** Reviewed existing Stage and Production version 1.0 and the Development change set.

**2.** Selected only Insurance Claim Request & Processing Management. The release adds Verify_Claim_Query_Optimization; unrelated applications were excluded.

**3.** Prepared a minor release titled Insurance Claims - Query Verification, version 1.1, with a description of the read-only function and Development tests.

**4.** Published the selected update to Stage, inspected release status and promoted the same release to Production after Stage completion.

**5.** Checked Production version, opened the application and compared dashboard totals with the pre-release baseline.

| Release item | Details |
| --- | --- |
| Version / scope | 1.0 to 1.1; one added Deluge function |
| Data changes in release | Application component publication; synthetic Development records are not migrated by environment publication. |
| Access scope | Existing application permissions retained; no public report or dashboard access added. |
| Test basis | Empty and three-record Development execution; count comparison and closed-claim report exclusion. |
| Deployment outcome | Stage and Production both display version 1.1 dated 19 October 2026. Version History records the minor release Insurance Claims - Query Verification. Production opened successfully after publication and retained 11 claims, 8 requiring processing, 3 approved, INR 1,410,450 requested and INR 100,000 approved. Only the insurance application's read-only query-verification function was added. |

## Operational notes

The original prepared wizard expired while idle. It was discarded and recreated before publication. Zoho temporarily locks application design during publication. Application data is separate across Development, Stage and Production; version publication is not a data-copy process.

## Evidence: deployment

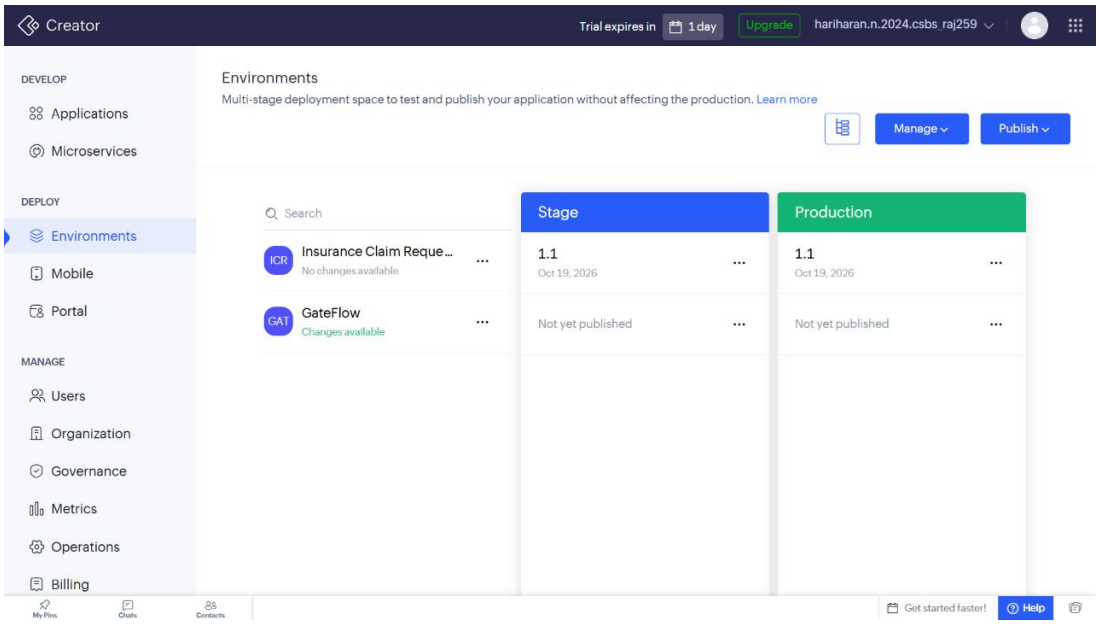

*Figure 11.1 - Real environment screen confirming version 1.1 in Stage and Production.*

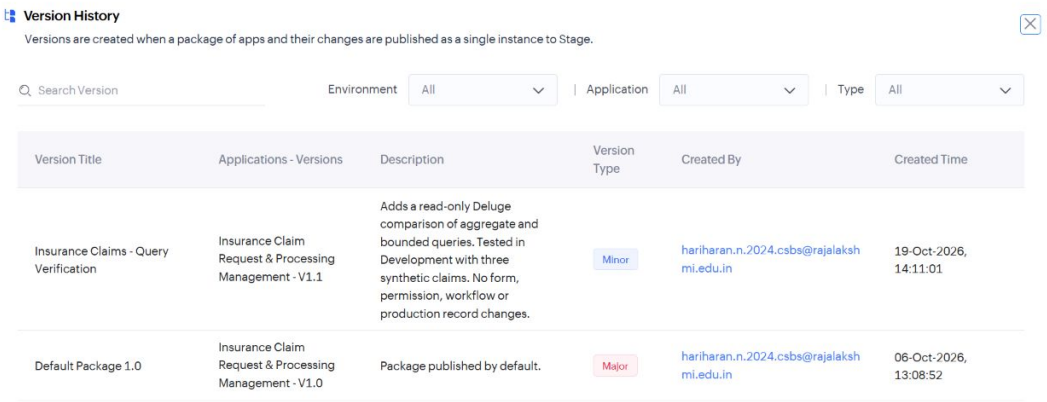

*Figure 11.2 - Actual version history with the minor release title, scope and creation time.*

## Result

Stage and Production both display version 1.1 dated 19 October 2026. Version History records the minor release Insurance Claims - Query Verification. Production opened successfully after publication and retained 11 claims, 8 requiring processing, 3 approved, INR 1,410,450 requested and INR 100,000 approved. Only the insurance application's read-only query-verification function was added.

## Post-deployment smoke test

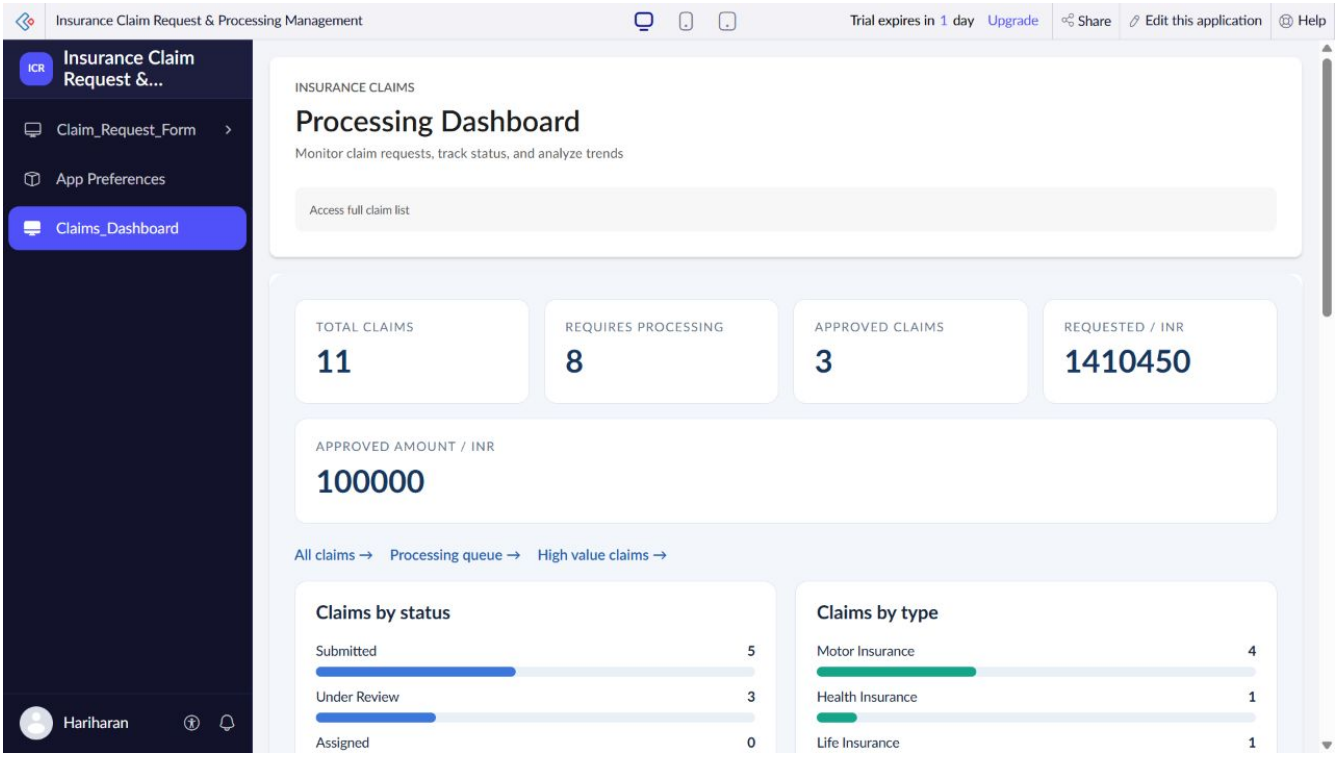

*Figure 11.3 - Live Production dashboard opened after deployment, with baseline totals retained.*

| Smoke-test check | Observed outcome |
|---|---|
| Application availability | Production dashboard loaded successfully after publication. |
| Version | 1.1 in both Stage and Production. |
| Data summary | 11 total, 8 requiring processing, 3 approved. |
| Amount summary | INR 1,410,450 requested; INR 100,000 approved. |
| Release boundary | One read-only function added; no new data submission or claim processing action performed during the smoke test. |

This is a deployment smoke test, not a full regression or separate-user security test. The deployment confirms publication and retained dashboard behavior; it does not establish enterprise performance.
